-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Shaper (U.S. Patent No. 3,327,808).

Regarding claim 1, Shaper teaches a loudspeaker system, comprising a virtual acoustic radial transmission line (figs 1-6), a tuned port (24, 40, 55), at least one waveguide (15), a right - angle waveguide (14), a reactive element (16, 20, 34, 38, 56-57, 67-68, 86), and a dynamic driver (13, 32, 54, 62, 85), whereby the sub-bass frequency response is improved (col. 1 lines 9-12).

Regarding claim 2, Shaper teaches a virtual acoustic radial transmission line (figs. 1-6), comprising a right angle waveguide (14) and flat panel members (top flange portion of 10 supporting woofer 32, 15), whereby the transmission line improves the low frequency response of a bass-reflex loudspeaker (col. 1 lines 9-12).

Regarding claim 3, Shaper teaches a virtual acoustic radial transmission line for improving the lower frequency response of a loudspeaker, the transmission line comprising a right angle wave guide (14), one or more flat panel members (top flange portion of 10 supporting woofer 32, 15) and a baffle board (near 16), whereby at least one flat panel member is of approximate dimension to the baffle board (col. 1 lines 9-12).
